Risk-Capital-Solvency: Re/Insurance Simulation Game

Sharing expertise with our clients and helping to develop the next generation of decision-makers is important for PartnerRe. Our advanced re/insurance management simulation game – ReSolve – focuses on developing the risk and capital management skills necessary to adapt and thrive in a changing world.

Game structure
4-5 teams compete against each other in a virtual marketplace. Over up to eight rounds (fiscal periods), teams make top management decisions for their virtual non-life insurance company based on their own company, external insurance market and financial/economic data. Decisions must be made across all business areas including asset management, risk management, risk appetite, capital management, underwriting guidelines, pricing and sales.

After each round, teams receive a detailed results report for their virtual company: balance sheet, profit and loss, cash flow, shareholders’ equity and other key financial measures such as their Solvency Capital Ratio (SCR) are presented, together with a full market analysis and industry articles. Teams must consider and discuss how their previous decisions influenced their result and what their next actions will be to enhance their performance and build a sustainable success story for their company.

The winner is the team that generates the highest economic value (share price).
